

Table of contents

Symbols	VII
Constants	XII
Conversions	XIII
Excitation Lamps for Solid State Laser	XV
1 Basics	1
1.1 Creation of Light	1
1.2 Line Radiation	6
1.3 Continuum Radiation	10
1.4 Total Radiation	12
1.5 Plasma Parameter	17
1.6 Plasma Ignition	21
1.7 Electron Emission	25
2 Electrode and Plasma Physics	33
2.1 Plasma Regions	33
2.2 Cathode Regions	34
2.3 Plasma Column	41
2.4 Wall	46
2.5 Anode Region	48
2.6 Electrode Heat Balance	49
2.7 Electrode Fall	54
3 Electrode Mechanism	59
3.1 Surface Work Function	59
3.2 Supply and Loss of Ba	67
3.3 Life Time of Dispenser Cathodes	73
3.4 Electrode Degradation	75
4 Electrode Temperature	87
4.1 Electrode Operating Modes	88
4.2 Cathode Temperature	90
4.3 Cathode Temperature in Spot Mode	93
4.4 Cathode Temperature in Diffuse Mode	96
4.5 Cathode Time Constant	98
4.6 Anode Temperature	101
5 Operation	103
5.1 Light Emission	103
5.2 Plasma Convection	110
5.3 Degradation and Deposits	112
5.4 Operating Pressure and Temperature	117
5.5 Pulsed Operating	118
5.6 Critical Acoustic Frequencies	120

6 Scaling Rules	123
6.1 Operation Limits	124
6.2 Cooling	128
6.3 Life Time	135
7 Electrical Parameters	141
7.1 Ignition	141
7.2 Simmer Mode Operation	148
7.3 Operation Range	150
7.4 Current Rise	154
7.5 Flash Lamp Operation	155
7.6 Arc and Flash Lamp Modulation	159
8 Design and Production of Laser Lamps	161
8.1 Seal	161
8.2 Cathode	165
8.3 Anode	171
8.4 Quality Aspects	172
8.5 Gas Fill	174
8.6 Bipolar Lamps	175
9 Measuring and Analyzing Methods	177
9.1 Strain Analysis	177
9.2 Temperature Measurement	180
9.3 Electrode Properties	182
9.4 Lamp Diagnostic	187
9.5 Abel Transformation	189
10 Appendix	191
10.1 CRT-Cathode Types	191
10.2 Work Function of Potential Cathode Materials	194
10.3 Chemical Reactions in the Dispenser Material	199
10.4 Tungsten Properties	200
10.5 Quartz Tube	206
10.6 Transition Glass	211
10.7 Filling Gases	212
Reference	215
Index	223
